

How to Use Ventilation to Properly Protect your Roof and Decrease your Electric Bill

The last thing people usually think about when it comes to their roofing system is ventilation. Of course, when it comes to professional roofing contractors, it's one of the first things we consider. The pros know that your ventilation system has a significant impact on your roof, your utility bills, and your home in general. Although you may not realize how important ventilation is for your roof and home, you'll notice a difference once you have it professionally installed. You'll take better care of your roof, lower your utility costs, and notice a more comfortable household. Generally, you need at least one square foot of ventilation per 150 square feet of attic space. This can be different based on lower roofing systems and other factors. However, it's critical to know about vents and how it impacts your home.

Home Improvement Begins With Roof Ventilation
